

Hello, I'm

Jude Otis Robinson

JudeOtis.me

JudeORobinson@gmail.com

+44 7470 546485

Summary

First-class Mechatronics Engineering graduate with an IET award-winning background in rapid prototyping and robotics. I specialize in integrating mechanical, electrical, and software systems to deliver complex interactive installations, including custom animatronics for Wake The Tiger and 10-meter LED sculptures for Jack Wimperis Lighting. Driven by a passion for hands-on fabrication, I bring strong cross-disciplinary design and problem-solving skills to high-stakes engineering environments. This passion has driven my outstanding academic work, broad professional history, and extensive catalog of personal projects that I continue to build in my ever expanding workshop and can be viewed on my website.

Education

University of Glasgow

BEng in Mechatronics - First Class Honours

2022 - 2026

A course focusing on combined electrical, mechanical, and software systems with a focus on applications in automation and robotics.

Advanced courses include:

Individual project - Where I designed and manufactured a robot capable of creating daisy chains, winning an IET manufacturing award.

Mechanical design - A practical course where we designed a modular caster system for an air ambulance, from stakeholder interviews and standards research, to product design and detailed documentation.

Robotics - A comprehensive course covering most modern sensors, actuators, and controllers used modern robotics, including a competition to make a walking combat robot which my team won.

Digital Signals Processing - Covering advanced signal processing theory and application, including FFT, FIR, and convolution.

Control - An in depth course covering advanced classical and digital control theory, and real world application.

Work History

Jack Wimperis Lighting

Lead Electronic and Software Engineer

2019 - 2026

Working on a broad range of projects with award winning artist Jack Wimperis to bring to life sculptural lighting installations. This includes work for Glastonbury festival, Leeds light night, Sky Art's "Landmark", Canary Wharf Light festival, and more.

| Low voltage Design | Software Engineering | Leadership

Wake The Tiger

Animatronic Engineer

2021 - 2022

Designing and installing custom animatronic systems for various rooms in Wake The Tiger Amusement park. Work included a custom motion controller board used to make self-typing typewriters, Analogue thunderstorm effects, and an interactive time machine dashboard.

| PCB Design | Actuator Integration | Communication

Cory Burr | Design Fabricators

Electronics Consultant

2021 - 2022

Brought on to manufacture a custom wireless controller and motion driver for a client, allowing an interactive experience in a high art environment.

| Human Interface Design | Embedded Electronics | Mechanical Design

Skills

Electronic

| Analogue Electronics | Embedded Systems
| Actuator and Sensing | PCB Design | Soldering

Mechanical

| Schematic Generation | Fusion 360
| Design For Manufacture | Finite Element Analysis | 3D Printing

Software

| C++ | Python
| Matlab | Github | FreeRTOS

Other

| Teamwork | Communication
| Drivers Licence | Willing to Relocate | Graphic Design
